Summary of Qualifications

Experienced **Senior Frontend Engineer** specializing in **frontend** development with a focus on **React since 2019 (7 years)**. Skilled in building scalable and robust web applications using **TypeScript** and the **React ecosystem**, including **Next.js (since 2022)** and **TanStack Start**, across client-rendered, **SSR**, and **ISR** architectures. Work covers **design systems**, **Core Web Vitals**, and the full delivery cycle: planning, architecture, implementation, testing, monitoring, and production support.

Experience

Leanwork | Londrina, Brazil | Jul 2018 - Present

Senior Frontend Engineer | Rheon | Sep 2025 - Present

- Cut **Azure** build time by 83% (from 6 minutes to 1 minute) by rebuilding the multi-tenant marketplace on **TanStack Start**. The **Next.js** app stayed live. Without Vercel, its Azure deploy was the slow part.
- Put the **TanStack Start** app under **Vitest**: 800+ tests, covering about 78% of the lines.
- Kept the legacy **Next.js** storefront and the new **TanStack Start** app in production together. Same multi-tenant marketplace. Used **Cursor** to implement changes and reviewed each one before merge, while pharmacies onboarded.

Tech Lead Frontend | Sinerlog | Jan 2025 - Aug 2025

- Led a team of 3 frontend engineers in the simultaneous delivery of four admin applications and one multi-tenant e-commerce platform using **React**, **Next.js**, Vite, and **TypeScript**.
- Worked closely with the client through recurring alignment meetings, translating business requirements into technical scope, priorities, and frontend delivery plans.
- Designed a shared UI registry inspired by shadcn/ui, standardizing reusable components across applications and reducing duplicated implementations.
- Helped structure separate HML and production delivery pipelines so each environment could be deployed independently.

Senior Frontend Engineer | FarmaciasApp | Jan 2023 - Dec 2024

- Improved catalog and product templates on a **Next.js** pharmacy marketplace by memoizing components, caching data, and serving images with next/image, then checking the pages in Chrome Lighthouse.
- Made product pages easier to index and share with JSON-LD and Open Graph, and tracked storefront events with Google Tag Manager. Pages rendered with **SSR** and **ISR**.

Frontend Engineer | Riachuelo (Fanlab, Carter's) | Jan 2021 - Dec 2022

- Built and maintained the Fanlab and Carter's storefronts with **React**, **Next.js**, and **TypeScript**, shipping features on large teams.
- Improved app cold start by adding a YAML reader for environment config, so the team loaded env at startup instead of setting variables by hand.

Frontend Engineer | Centauro | Jan 2019 - Dec 2020

- Built a product page where customers customized t-shirts on an HTML canvas with fabric.js.
- Moved in-store t-shirt customization to **React** and Electron totems, and migrated that UI from class components to functions.

Junior Frontend Engineer | Leanwork | Jul 2018 - Dec 2018

- Styled and fixed legacy storefronts (HTML, CSS, JavaScript, jQuery) and built an Angular app for courses, exams, and students.

Elitesoft Informática | Londrina, Brazil | Jan 2017 - Jun 2018

Junior Software Engineer

- Moved the ISP ERP UI from Qooxdoo to Angular and cut maintenance time by about 40%, working across PHP, MySQL, and Angular.
- Automated weekly support tasks that clients were doing by hand.

Skills

Frontend: React, Next.js, TanStack Start, TanStack Router, TypeScript, JavaScript, Vite, Tailwind CSS, shadcn/ui, HTML, CSS

Testing: Vitest

Backend: Node.js, Bun, Fastify, Prisma, Drizzle, PostgreSQL, SQLite, PHP, MySQL

DevOps: Docker, CI/CD, Azure, AWS, Cloudflare

Design: Figma, Adobe XD, Photoshop

Education

Bachelor of Computer Engineering | UNOPAR (Universidade Norte do Paraná), Londrina, Brazil | 2013 - 2017

Postgraduate Degree, Full-Stack JavaScript with AI | Rocketseat | Jan 2025 - Jun 2026

Languages

- **Portuguese:** Native
- **English:** Advanced
